

WHEY CMR CALF MILK REPLACER

Ngahiwi Whey is formulated for calves 14 days and older and is formulated to optimise and accelerate calf growth. It combines a well-balanced milk-protein & fat-level milk powder with probiotics, prebiotics, essential oils, a vitamin & mineral premix and a coccidiostat to give calves the best start possible*. Ngahiwi Whey is a non-curding milk powder and we recommend that it is fed from 14 days of age, after calves have had both adequate colostrum and either whole milk or a curding CMR like Ngahiwi Premium.

HOW TO FEED YOUR CALF WITH NGAHIWI WHEY

Week	Feeds per day	Litres	Mix Rate	Meal per day
3	1	2.5	200g	0.5kg
4	1	3.0	200g	1.0kg
5	1	3.0	200g	1.5kg
6	1	3.0	200g	1.5kg
7 - 10	Wean off milk			

FEEDING TIPS

- Add CMR to 40° Celsius warm water and cool until 36° before feeding
- Use a thermometer if new to calf rearing
- Feed in morning and use compartment feeders to monitor slow feeders
- Mix rate/concentration 200g/litre throughout rearing
- Make pasture available to calves from week 3
- Calf weaned off milk at 65kg, when meal concentration is increased

* NGAHIWI ADDITIVES - THE COMPLETE CMR

Ngahiwi Whey CMR includes a comprehensive Premix with essential vitamins and minerals. Optimum health and growth are promoted by the inclusion of probiotics, prebiotics, essential oils and an coccidiostat. No need for expensive supplements.

THE THREE Q'S OF COLOSTRUM

Colostrum intake directly affects a calf's health outcome and growth. Colostrum-deprived calves have little or no immunity to the many pathogens in their environment.

Remember the three Q's...

QUALITY	Feed calves with quality colostrum from mature cows
QUANTITY	Minimum 3 litres over two feeds in first 6 hours
QUICKLY	As soon as possible, and at latest 6 hours after birth

TYPICAL PRODUCT ANALYSIS

Protein	22%
Fat	18%
Lactose	48%
Minerals	8.5%
Moisture	3.5%
